

The Palmetto 800 system's P-25 conversion is tentatively scheduled for July 24 @ 20:00hrs. When this occurs the current talk groups we currently utilize will no longer work. Radio users will have to manually change to the P25 zone (which are already programmed in CCFR radios). Also, radio communications may be disrupted for a few minutes.

The current talk groups will no longer work after the P25 conversion and will display "out of range" Also, the new "Colleton1 P25" talk groups will display "out of range" until the P25 conversion occurs.

You will receive a CodeMessaging Alert or Text when the conversion is complete. At that time, you will need to manually change zones to the "Colleton1 P25". Use the following procedures to manually change your radio to the P-25 zone.

Base radios, mobile radios, and portable radios with screens require you only to zone up/down (ZNUP / ZNDN) to the "Colleton1 P25" zone where the talkgroups are similar to what is currently used.  
For portable radios without screens, you should use the radios soft keys to select "Colleton1 P25" (see below).

Radios without display Select Function "C" then press middle button with the one square

Finally – All personnel should review Directive 2.1.37 regarding the conventional repeater use, should it be necessary to use that system as a backup.
